## FRISBEE newsletter #1

- News about Oil and Gas Data from Denmark

GEUS hereby introduces the 'FRISBEE Newsletter' to keep you informed about new releases of data from the Danish sector. At the time being only well data can be purchased through the system.

### **Frisbee password protection upgrade**

We have upgraded the security of the password handling within the Frisbee system. This was done, to ensure the safest possible handling of user information within the system. During the upgrade of the security module, it was necessary to reset the password of all users, as it is impossible (both in the old and the new system) for GEUS to read the real passwords.

To create a new password, you have to use the "Forgot username or password" function within the portal:

[https://frisbee.geus.dk/frisbee/account\\_generatepassword.jsp](https://frisbee.geus.dk/frisbee/account_generatepassword.jsp)

This will supply you with a temporary password in order to log on to the portal. Once you are on the portal, you can change the password to whatever you desire.

This procedure was chosen, to ensure that GEUS at no point in time would know your password.

### **Newly released well data:**

Offshore, Danish North Sea:

BO-3X (Full package DKK 27,850)

GITA-1X (Full package DKK 25,50)

RIGS-4 (Full package DKK 32 875)

RAVN-3 (Full package DKK 36,625)

---

All prices are for one company and are excl. VAT

Discounts for licence groups are available

**What is a ‘Digital well data package?’**

Well data is sold as “Well data packages” for each well separately.

If available, a package consists of:

Scanned reports, Scanned logs, Original well log data, Merged log data, Scanned core photos, Deviation/Position data, VSP data, Mud logging data, Technical and administrative data & Documentation files.
